

SMART CUT - NOVELTY -

Cutting system for large formats

SMART CUT is a system for cutting large ceramic and gres porcelain slabs. It consists of a sliding carriage with a 13 mm Ø wheel for cutting and plier for separating. SMART CUT is to be used on one of the aluminium SIRI guides dedicated. Thanks to four ball bearing pvc pulleys, SMART CUT slides smoothly along the guide. By applying pressure with your hands on the knobs (6 - 7), the tile will be deeply incised and the separation can then be carried out easily with the supplied plier. The plier to separate the tiles after the score, can be adjusted for a thickness up to 10 mm.
